Split plummer block housings SNV

Features	Split FAG plummer block housings SNV and the associated bearings form bearing arrangement units that can be matched, through the appropriate selection of accessories, to a wide range of applications. Applications include agricultural machinery, the paper processing industry, mining, materials processing, the steel industry and power stations.																																		
Modular concept	The housings are designed in accordance with a modular concept. Each housing can be fitted with rolling bearings of various diameter and width series if they have the correct outside diameter for the housing. Depending on their design, the bearings can be located either directly on the shaft or by means of an adapter sleeve. This gives different shaft diameters for the same bearing size. The spacings between the shaft and housing body are compensated by means of appropriately matched seals.																																		
Dimensions and interchangeability	The dimensions of the housings SNV correspond to ISO 113 and DIN 736 to DIN 739. The housings SNV are interchangeable with the existing housings SN and SNE.																																		
Suitable bearings	Split plummer block housings SNV are suitable for fitting with spherical roller bearings, barrel roller bearings and self-aligning ball bearings with a tapered or cylindrical bore as well as deep groove ball bearings, see table. The range of shaft diameters is 20 mm to 160 mm and $\frac{3}{4}$ inch to $5\frac{1}{2}$ inch.

Barrel roller bearings	20205-K to 20232-K
■ with tapered bore and adapter sleeve	20305-K to 20332-K
■ with cylindrical bore	20205 to 20232 20305 to 20330
Deep groove ball bearings	6205 to 6232
■ with cylindrical bore	6304 to 6332

Split spherical roller bearings

Unsplit spherical roller bearings with an adapter sleeve can be replaced by split spherical roller bearings. This gives a considerable reduction in the work associated with bearing replacement in numerous applications.

In order to ensure selection of the correct combination of housing and bearing, please contact us.

Further information

■ WL 43165, Split Spherical Roller Bearings.

Housing materials and anti-corrosion protection

The standard material for the housing bodies is flake graphite cast iron EN-GJL-HB215 in accordance with DIN EN 1561 (suffix L). By agreement, housing bodies made from spheroidal graphite cast iron EN-GJS-400-15 in accordance with DIN EN 1563 (suffix D) are available.

All outer surfaces not machined by chip-forming methods have a universal paint coating (colour RAL 7031, bluish-grey). The coating can be finished using all synthetic resin, polyurethane, acrylic, epoxy resin, chlorinated rubber, nitrocellulose and acid-hardening hammer tone finishes.

Inner and outer surfaces machined by chip-forming methods are provided with anti-corrosion protection that can be easily removed. It is recommended that only volatile solvents and lint-free cloths should be used.

Locating and non-locating bearings

The bearing seats in the housing are machined such that the bearings are movable in the housing and can thus function as non-locating bearings. Locating bearing arrangements can be achieved by the insertion of one locating ring FRM on each side of the bearing outer ring. The bearing is thus seated in the centre of the housing. Locating rings must be ordered separately.

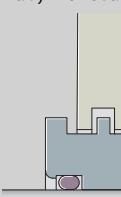

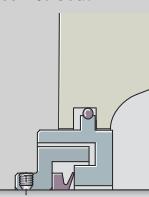

Split plummer block housings SNV

Seals and covers	For sealing of the bearing housings, the standard seals available are the labyrinth seal, the Taconite seal, the double lip seal, the V ring seal and the felt seal. These seals are matched to the rectangular section annular slots on both sides of the housings. They are principally suitable for grease lubrication. The seals must be ordered separately. They are supplied individually. If a continuous shaft is present, two seals must be ordered. Special seals are also available by agreement.
Labyrinth seals TSV	Labyrinth seals TSV give non-contact sealing. They are therefore suitable for high circumferential velocities. The O ring made from fluoro rubber FKM pressed between the labyrinth ring and shaft is suitable for temperatures up to +200 °C. The labyrinth seal allows shaft misalignment of up to 0,5° in both directions. If necessary, the labyrinth can be relubricated. For this purpose, a lubrication hole must be made in the upper housing section for each labyrinth seal. The optimum positions are indicated by cast-in pilot holes.
Taconite seals TCV	Taconite seals TCV are combined seals comprising a labyrinth seal and a V ring. These seals are suitable for extreme operating conditions in relation to contamination and dust. The V ring is made from NBR and is suitable for temperatures up to +100 °C. The Taconite seal allows shaft misalignment of up to 0,5° on both sides.
Double lip seals DH	The seal lips of the double lip seal DH slide on the rotating shaft. The outer seal lip prevents ingress of contamination into the bearing. This effect is supported by the grease inserted between the seal lips. The inner lip prevents lubricant from escaping from the housing. The seal is made from acrylonitrile butadiene rubber NBR and is suitable for circumferential velocities of up to 13 m/s. For continuous operation, a maximum circumferential velocity of 6 m/s is recommended. The seal is suitable for temperatures from -40 °C to +100 °C. It allows shaft misalignment of up to 0,5° in both directions.

	<p>The double lip seal DH is a two-piece seal. It can be easily inserted in the annular slots in the housing. The parting joint of the seal halves should be in the same plane as the parting joint of the housing.</p> <p>The contact running area on the shaft for the seal lips should have a roughness Ra 3,2.</p>	
V ring seal DHV	<p>In the case of V ring seals DHV, the seal lip is in axial contact with the sliding surface which is located in the rectangular section annular slot of the housing.</p> <p>The seal is made from NBR and is suitable, when using grease lubrication, for circumferential velocities of up to 12 m/s. If circumferential velocities of more than 8 m/s are present, axial location is necessary. The seal allows shaft misalignment of up to 0,5° in both directions.</p>	
Felt seals FSV	<p>The seals are suitable for circumferential velocities of up to 5 m/s and, after running-in, up to 15 m/s. They can be used at temperatures up to +100 °C. By agreement, aramide packing is available for high temperatures.</p> <p>The permissible shaft misalignment is 0,5° in both directions.</p> <p>Felt seals FSV are particularly suitable for grease lubrication. They comprise an adapter holding the inserted, oil-impregnated felt strip and the adapter is secured against rotation by an O ring in the annular slot in the housing.</p>	
Covers DKV	<p>Covers are used in the case of housings closed on one side. The covers fit in the rectangular section annular slots in the housings. Covers DKV are made from plastic and are suitable for long term temperatures of up to +120 °C.</p> <p>The covers must be ordered separately.</p>	
Cover DKVT	<p>Covers DKVT are made from steel, flake graphite cast iron or spheroidal graphite cast iron and are suitable for temperatures of up to +200 °C. They are supplied by agreement.</p>	
Characteristics and operating limits	<p>The characteristics and operating limits of the standard seals and covers are compared in an overview, see table, page 60.</p>

Split plummer block housings SNV

Housing configurations

The modular structure of plummer block housings SNV facilitates numerous possible combinations, *Figure 1* and *Figure 2*, page 63. On the basis of the standard components, the following features can be varied in the housing configuration:

- location of bearings with a tapered bore by means of an adapter sleeve on a shaft of constant diameter or of bearings with a cylindrical bore directly on a stepped shaft
- sealing of the housing by means of a labyrinth seal, Taconite seal, double lip seal, V ring seal or felt seal
- continuous shaft or a housing closed on one side
- cover made from plastic (DKV) or cover made from steel or cast iron (DKVT)
- design of the bearing arrangement as a locating bearing arrangement or a non-locating bearing arrangement.
- spherical roller bearing in a split or unsplit design.

 (overview of combinations)

Mounting of split spherical roller bearings

In the case of plummer block housings SNV, an unsplit spherical roller bearing with a tapered bore and adapter sleeve can be replaced by a split spherical roller bearing, *Figure 3*.

- ① Locating bearing with unsplit bearing
- ② Non-locating bearing with unsplit bearing
- ③ Locating bearing with split bearing
- ④ Non-locating bearing with split bearing

Figure 3
 Plummer block housings SNV
 with split and unsplit
 spherical roller bearing

Split plummer block housings SNV

Lubrication	Split plummer block housings SNV are principally intended for grease lubrication. The housings can, however, also be supplied in a design for oil lubrication.
Greases	<p>In the case of bearing operating temperatures $< +100\text{ }^{\circ}\text{C}$, bearing loads $P/C < 0,3$ and a bearing-specific speed parameter $k_f \cdot n \cdot d_M < 700\,000\text{ min}^{-1} \cdot \text{mm}$ ($k_f = 1$ for self-aligning ball bearings and deep groove ball bearings, $k_f = 8$ to $10,5$ for spherical roller bearings), the most suitable grease is Arcanol MULTITOP, a lithium soap grease of NLGI grade 2 with particularly effective EP additives.</p> <p>Due to their favourable flow behaviour, greases of NLGI grade 2, such as Arcanol MULTITOP and Arcanol MULTI2, are more suitable for relubrication than greases of higher consistency grades.</p>

Grease quantities

For initial greasing, the basic rule is that the bearing should be filled with grease to 100% and the free volume of the housing to 60%. This is the basis for the recommended grease quantities, see table. The free volume is the space that remains in the housing once the bearing, adapter sleeve, shaft and seals have been fitted.

For relubrication, minimum quantities of grease are recommended.

Recommended grease quantities for initial greasing and relubrication

Housing	Grease quantity	
	Initial greasing ≈ g	Relubrication (minimum quantity) ≈ g
SNV052-F	30	5
SNV062-F	45	5
SNV072-F	65	10
SNV080-F	80	10
SNV085-F	105	10
SNV090-F	130	10
SNV100-F	180	15
SNV110-F	210	15
SNV120-F	270	20
SNV125-F	290	20
SNV130-F	330	20
SNV140-F	440	25
SNV150-F	500	30
SNV160-F	650	40
SNV170-F	700	45
SNV180-F	900	55
SNV190-F	950	60
SNV200-F	1 200	70
SNV215-F	1 400	80
SNV230-F	1 600	85
SNV240-F	1 700	90
SNV250-F	2 000	100
SNV260-F	2 000	120
SNV270-F	2 500	130
SNV280-F	2 600	140
SNV290-F	3 000	150
SNV300-F	3 100	160
SNV320-F	3 700	200
SNV340-F	4 500	240

For a speed parameter $n \cdot d_M < 50\,000 \text{ min}^{-1} \cdot \text{mm}$ and a non-contact seal (labyrinth seal TSV), where the grease should also perform a sealing function, the housing and seal cavities should be filled to 100%.

Split plummer block housings SNV

Relubrication

Where relubrication is carried out on bearings with a circumferential lubrication groove, the grease is introduced into the housing via the central lubrication hole, *Figure 4, ③*. In this type of relubrication, the grease acts directly on the bearing raceway.

Where relubrication is carried out on bearings without a circumferential lubrication groove, the grease is introduced laterally into the housing, *Figure 4, ④*. In this case, the housing cavities on the side with the lubrication nipple must be filled completely with grease so that the relubrication grease can act immediately on the bearing.

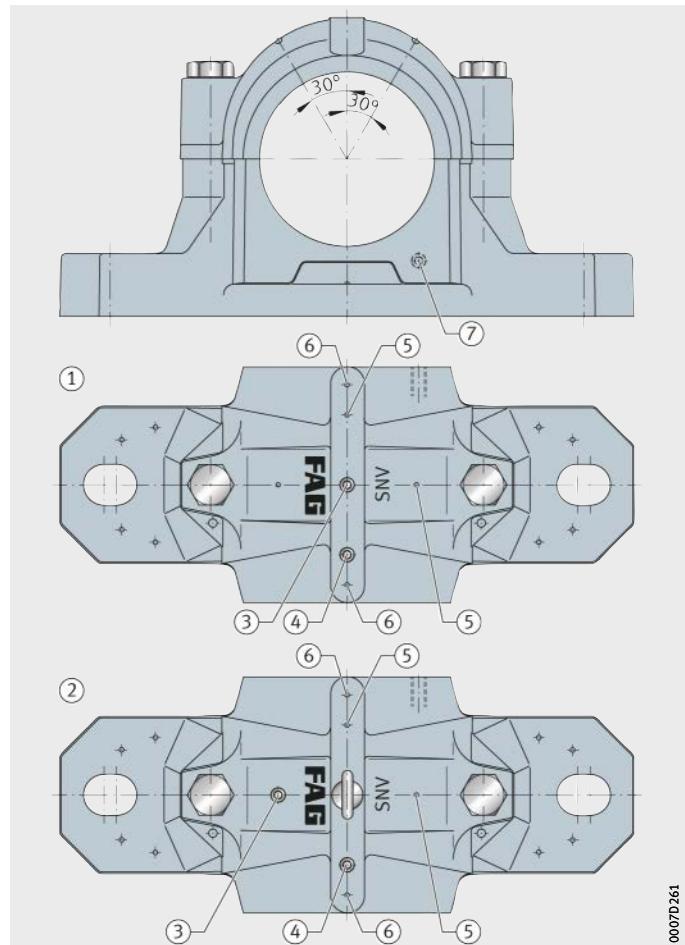

Figure 4
Positions for relubrication

0007D261

In both cases, the lubrication hole present (threaded hole M10×1) is prepared by removing the screw plug and permanently inserting one of the lubrication nipples supplied at this point. As an alternative to the lubrication holes already present, lubrication holes may be introduced at other positions as indicated by the cast-in pilot holes, *Figure 4*, page 66, ⑤.

Lubrication holes can be introduced at further marked positions for the relubrication of labyrinth seals, *Figure 4*, page 66, ⑥.

For relubrication, minimum quantities of grease are recommended, see table, page 65. In order to prevent overgreasing, the screw plug in the grease outlet hole in the lower housing section must be removed while relubrication is being carried out, *Figure 4*, page 66, ⑦. This allows superfluous grease to escape. This must be observed in particular when using double lip seals DH. Otherwise, there is a risk that the double lip seal will be pressed out of the housing.

The grease outlet hole must then be closed off again using the screw plug.

If unfavourable environmental conditions are present, there is therefore a risk of contaminant ingress into the housing when the grease outlet holes are opened.

Dimensions

The lubrication and grease outlet holes are closed off using screw plugs to DIN 906.

Lubrication nipples with a dust cap are supplied as follows:

- button head lubrication nipples to DIN 3404-M10×1
- taper type lubrication nipples to DIN 71412-AM10×1.

The size of the grease outlet hole is dependent on the size of the housing, see table.

Dimensions of threaded holes

Housing	Thread for	
	grease outlet hole	relubrication hole
SNV052-F – SNV090-F	M10×1	M10×1
SNV100-F – SNV125-F	M14×1,5	
SNV130-F – SNV340-F	M20×1,5	

Split plummer block housings SNV

Oil lubrication	Split plummer block housings SNV are suitable not only for grease lubrication but also for oil bath lubrication and recirculating oil lubrication. The housings have a large internal cavity with oil collector pockets in the lower section. Due to the housing geometry, it is possible to introduce connection holes for oil inlet, oil outlet, an oil sight glass and a temperature sensor.																																																																																																																																																														
Dimensions of connection holes for oil lubrication	<p>The recommended dimensions, see tables and <i>Figure 5</i>, page 69, are valid for oil bath lubrication and recirculating oil lubrication.</p> <p>If recirculating oil lubrication is used, the hole M₂ is intended for the oil inlet function. If oil bath lubrication is used, a venting device can be installed for venting of the housing.</p> <p>If oil bath lubrication is used, the hole M₄ is intended for the oil sight glass. If recirculating oil lubrication is used, the hole can be used for the oil outlet.</p>

Figure 5
Dimensions of connection holes

Split plummer block housings SNV

Design for oil lubrication

Plummer block housings SNV can be supplied by agreement in a design for oil lubrication. Housings of this design already have the connection holes for oil inlet, oil outlet and an oil sight glass to the recommended dimensions.

The scope of delivery of the design for oil lubrication includes:

- 1 oil sight glass OSGL
- 1 venting device VENT
- 2 screw plugs VSB.

Housings with connection holes according to individual customer specifications can also be supplied once their feasibility has been checked.

Sealing of the shaft

When using the double lip seal DH, a certain amount of oil leakage must be expected, which is unavoidable with seals that are split and not spring-loaded.

In order to limit oil leakage to a small quantity, the shaft in the seal area should have the following characteristics:

- hardness at least 55 HRC
- ground free from spiral marks with a surface roughness of Ra 0,2 µm to Ra 0,5 µm.

A technically oiltight design is only possible with a spring-loaded, unsplit rotary shaft seal.

Sealing of the housing body

The parting line between the upper and lower sections of the housing must be sealed with a thin layer of a commercial sealant (with permanent elasticity). In the case of a housing closed on one side, the base of the groove in which the cover is inserted must be brushed with sealant.

Guidelines on oil bath lubrication

When using oil bath lubrication, a minimum oil level must be ensured. This corresponds to the dimension h3, see table, page 69, and *Figure 5*, page 69.

When using oil bath lubrication, venting of the housing is absolutely necessary. For example, the filling hole can be closed off using a bleed screw.

Designation structure

Designation structure of plummer block housings SNV

The designation structure for split plummer block housings SNV and accessories is shown in the tables and *Figure 6* to *Figure 9*, page 73.

Ordering examples

When a split plummer block housing SNV is ordered, the housing designation only describes the housing body. The other components such as seals, covers or locating rings must be ordered separately in the specific design required. The rolling bearing and, if necessary, the adapter sleeve must also be ordered separately.

Plummer block housings SNV with a bearing fitted give non-locating bearing arrangements. These can be converted into locating bearing arrangements through the additional insertion of locating rings FRM.

The ordering examples show the construction of orders for selected housing combinations and the appropriate bearings. The allocation of housings, bearings and accessories for all housing sizes is shown in the dimension tables.

Example 1 Plummer block housing SNV made from flake graphite cast iron, closed on one side, self-aligning ball bearing 2210-K-TVH-C3 as locating bearing, location by means of an adapter sleeve on a shaft diameter of 45 mm, double lip seal.

Order	1 plummer block housing	SNV090-F-L
	1 self-aligning ball bearing	2210-K-TVH-C3
	1 adapter sleeve	H310
	2 locating rings	FRM90/9
	1 cover	DKV090
	1 double lip seal	DH510

Example 2 Plummer block housing SNV made from flake graphite cast iron, for continuous shaft, split spherical roller bearing 222SM70-TVPA as locating bearing, double lip seal.

Order	1 plummer block housing	SNV140-F-L
	1 split spherical roller bearing	222SM70-TVPA
	2 locating rings	FRM140/12,5
	2 double lip seals	DH516

Example 3 Plummer block housing SNV made from spheroidal graphite cast iron, closed on one side, spherical roller bearing 23218-E1-TVPB as non-locating bearing, felt seal.

Order	1 plummer block housing	SNV160-F-D
	1 spherical roller bearing	23218-E1-TVPB
	1 shaft nut	KM18
	1 tab washer	MB18
	1 cover	DKV160
	1 felt seal	FSV218

Design and safety guidelines

Load carrying capacity

Guide values have been determined for the rupture load of plummer block housings SNV and the maximum load carrying capacity of connecting screws for the upper and lower housing sections, *Figure 10* and table, page 76. The guide values are valid for purely static loading.

The guide values for housing rupture load are valid for the standard housing material flake graphite cast iron (suffix L). For spheroidal graphite cast iron (suffix D) a factor of 1,6 should be applied.

The guide values in the table, page 76, are only valid if the flatness of the mounting surface in accordance with DIN EN ISO 1101 corresponds to the tolerance grade IT8 in accordance with DIN EN ISO 286-1 (measured across the diagonal). A precondition for supporting loads is that the housing base surface is completely and rigidly supported.

When determining the permissible static load, safety factors must be applied:

- safety factor of 6 relative to the housing rupture load
- safety factor of 3 relative to the maximum load carrying capacity of the connecting screws.

The housing must not be subjected to an axial load of more than $\frac{2}{3}$ of the housing rupture load F_{180° .

If the housing is subjected to axial load, the permissible axial load of the bearing fitted must be taken into consideration. If the bearing is located on the shaft using an adapter sleeve, the axial retaining force of the bearing and adapter sleeve must also be taken into consideration.

If the load direction is between 55° and 120° or axial load is present, we recommend that the housings should be secured in the load direction by means of stops or dowels.

Housings made from spheroidal graphite cast iron (suffix D) have a housing rupture load 1,6 times higher than that of housings made from flake graphite cast iron.

¹⁾ The tightening torques are maximum values with 90% utilisation of the yield stress of the screw material and a friction coefficient of 0,14. We recommend tightening the screws to 70% of these values.

Eye bolts

In the case of housings of size SNV215 and larger, the upper housing section has an eye bolt in accordance with DIN 580. This is intended as a locating point for mounting and dismounting of the housing. The load carrying capacity of the eye bolt allows lifting of the housing including a bearing fitted in the housing.

The eye bolt must always be screwed fully into the housing.

The eye bolt must not be subjected to a mass greater than that of the housing together with the bearing fitted in the housing.

Foot screws

Foot screws are used for screw mounting of the housing to the mounting surface. They are not included in the scope of delivery of the housings.

The appropriate screw size for each housing is stated, see dimension tables.

The associated tightening torques are stated for screws with a metric thread in accordance with DIN 13, DIN 962 and DIN ISO 965-2, see table, page 42.

Accuracy

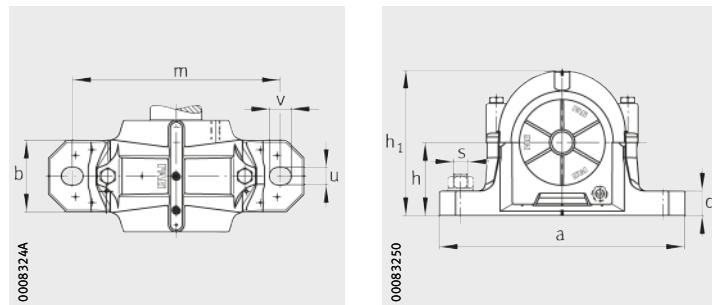

The bearing seat in split plummer block housings SNV is machined to the tolerance class G7. The tolerance indicated is valid in the delivered condition, i.e. before the screws connecting the upper and lower sections are loosened.

By agreement, the housings can also be supplied with other tolerance classes for the bearing seat, see section Tolerance class of bearing seat, page 47.
